Luke Salamone 414-875-7293

github.com/lukesalamone | lukesalamone94@gmail.com | lukesalamone.com

Artificial Intelligence Master's student with a focus in deep learning algorithms, natural language processing, and computer vision. Currently pursuing Summer 2021 internship in AI/ ML

TECHNICAL SKILLS

Programming:	Python OOP, Java, Javascript, SQL, Unix
Packages:	PyTorch, Tensorflow, Keras, OpenCV, MXNet, Scikit-Learn
Tools:	AWS, GCP, Heroku, CI/CD, Version control (Git), Postman, Balsamiq

CERTIFICATIONS

- **AWS Certified Solutions Architect** December 2017
- **Certified Software Security Engineer (Capital One)** October 2018

EDUCATION

Master of Science (M.S.) - **Artificial Intelligence**, **Northwestern University** Fall 2021
Bachelor of Science (B.S.) - Computer Science, **University of Wisconsin - Madison**

PROJECTS

Deep Q-Trading Agent - Traded stocks with 3 variations of multi-branch deep reinforcement learning agents. Reference paper: Replication of paper by Jeong et al.

- Model beats market by 144% on test range using transfer learning to maximize profits.

LSTM Language Model - Trained artificial recurrent neural network (RNN) to generate text in an unsupervised learning environment. Network architecture inspired by Zaremba et al.

- Achieved generation perplexity of 158 on Wikitext-2 and 76 on NYT corpus

GMM Classifier - Model used to classify MNIST digits into 10 different classes as an unsupervised learning clustering task. Model then used to generate new images.

- Accuracy of 62% in digit classification task using class-balanced dataset.

LEADERSHIP EXPERIENCE

Senior Software Engineer, **Capital One** February 2017 - February 2020

- Built data recommendation tool facilitating 30% of all internal Capital One metadata inquiries utilizing a hierarchical classification machine learning system.
- Reduced ETL costs 90+% by building a performant Java library for high-volume data streaming.
- Reduced errors by 95+%, lead development of serverless app for data integrity / reporting.

Android Developer, **Exis.io** May 2015 - June 2016

- Designed and built Bluetooth position approximation Android app. K-nearest neighbors machine learning classifier used to determine which room a user is currently in.
- Designed and developed Cards Against Humanity Android app using Exis.io pub/sub websocket technology.
